

F4/80

This flow cytometry histogram shows the expression of the F4/80 marker. The y-axis represents fluorescence intensity with tick marks, and the x-axis represents cell population with tick marks. The curve shows a sharp peak at the low end of the scale, followed by a broad distribution that tapers off towards the right.

CD11b

This flow cytometry histogram shows the expression of the CD11b marker. The y-axis represents fluorescence intensity with tick marks, and the x-axis represents cell population with tick marks. The curve shows a sharp peak at the low end of the scale, followed by a broad distribution that tapers off towards the right, similar to the F4/80 plot.
